

Henry recently contracted covid, he first decided to call the support center to align a time to get placement in covid housing. They tell him he must download an app sponsored by the school that will assist during his time in covid housing.

Henry used the app in order to appoint a time to be picked up via a bus that could be tracked as to avoid confusion on the buses pick up time and where. He boarded the bus and was brought to the nearest building available for housing.

Once brought to the building, he could notify the app of his arrival and be provided a staff member that could help him move his things in.

Once in his room, Henry could access food and water options via his app and not have to go through the trouble of ordering over the phone or using an outsourced app. Also he could get whichever food he wanted from a menu.

Case manager: \_\_\_\_\_

Case Doctor Name: \_\_\_\_\_

Case manager #: \_\_\_\_\_

Case Doctor #: \_\_\_\_\_

Need medicine call: \_\_\_\_\_

etc.

Henry began to feel deeply ill midway through his stay but did not know the name or number of his doctor. But he needn't worry, he could use the app to find all his case doctor's information and could have the option of medicine being delivered to his dorm on the dot.

After Henry's 14 days in isolation, he was finally able to get back into the groove of everyday life and to do so he first had to move out. Once ready, his app would notify him the night before his exodus. It would also notify the building staff in case he needed help moving his stuff. They would load up a golf cart and head to his dorm.
