Dear Human Resources Director,

The thought of coding has not left my mind since I made my own website at summer camp when I was 8 years old. Because of the excitement this sparked in me, I decided to pursue a bachelor's degree in Computer Science at the University of South Carolina. I am interested in being a Software Engineer Intern because it would give me the opportunity to work with an incredibly knowledgeable programming team and further my programming abilities. I love keeping my mind busy, so I believe a fast-paced, agile, and diverse work environment would be a great fit for me, especially at a company with years of award-winning technologies.

I was a part of the robotics club in middle school, so I was able to start developing my programming and problem-solving skills at a young age. Every year, we were assigned a task for both us and the robot. We were required to work as a team to both program and come up with a unique solution. All three years that I participated, we went to the state competition and won multiple awards in programming, puzzle solving, and teamwork.

During one of my computing classes at the University of South Carolina, I was required to create a website using GitHub and to frequently update it with projects that were assigned to my team. To create my website, I used Java code. I not only updated the site, but also customized and styled it to be more aesthetically pleasing. This programming required me to experiment in areas of Java I was not yet familiar with, as I had no prior experience in styling a webpage. I put in many hours to learn the new skill required to complete this task. My team and I also completed many problem-solving and thinking-outside-the-box type challenges for this assignment. In order to communicate effectively, we met weekly to discuss the progress on our portion of the assignment. Ultimately, we completed our assignments on time and my website was extremely clean and user friendly.

With the experience I have in programming and working with a team, I feel that I would be a great fit for the Software Engineer Intern position. I look forward to being able to add to the name of SIOS Technology. Thank you for your consideration.

Sincerely,

Alex Fischer
